**Course Description:**

*Study of key topics related to teaching science including nature of science, constructivism, science standards, preconceptions, and assessment for learning.*

The main purpose of this course is to introduce prospective science teachers to key ideas associated with teaching science at the secondary level, but is also relevant for any form of science teaching (undergraduate, informal education, etc.). Teaching science effectively requires that educators attend to the prior ideas that students bring with them into the classroom, that they provide experiences that allow students to construct their own knowledge, and that they pay careful attention to state/national or other guidelines about what needs to be taught. This course will introduce you to these fundamentals as a foundation for your professional education program including methods courses and teaching practica.

This introductory course is closely aligned with the Secondary Science Methods course SCED 491. In the present course, we will mostly discuss the fundamental ideas behind teaching science. All of the topics we cover will be developed in more detail in SCED 491, but that class will cover more of the “nuts-and-bolts” of teaching science (managing labs, practicing inquiry, doing demos, science assessment, etc.).

The format of this course is a mixture of lecture/activity and discussion. During the first hour of the class, we will often have an activity centered on that day’s topic. The second hour of the class will be devoted to student-led discussion of the readings for that day. It is imperative that you come to class having done the readings.

**Prerequisites:** CHEM 163 or CHEM 225 or GEOL 212 or BIOL 206 or PHYS 163

**Course Outcomes and Goals:** The major goals of this course are:

1. to develop a better understanding of the nature of science
2. to explore current research on how people learn
3. to become acquainted with the Next Generation Science Standards and their role in creating meaningful learning experiences
4. to become well-versed on the research behind, and practices of, effective science teaching and learning, including development of an equitable classroom
These goals will be accomplished in a variety of ways including: (1) class discussions on issues related to science instruction, e.g., processes of science, constructivism, formative assessment, etc., (2) review and application of the *Next Generation Science Standards*, (3) review of existing science curricula, (4) exploring and adapting a science lesson appropriate within the 6-12 grade range that incorporates all the key elements of effective science teaching, and (5) becoming aware of professional organizations for science teachers.

**Class format**
- **Class ZOOM** (Synchronous session with breakout rooms)
- **On your own** (asynchronous learning tasks and discussion threads always tied to an assignment).
- **Optional** (additional readings/resources not tied to an assignment)

**Texts:**
Although there are no “textbooks” in the traditional sense for this course, there is one book that you could consider purchasing. The reading assignments from this text will be posted as PDFs on canvas, but if you like to have your own hard copy of the text, here is the reference:

Throughout the quarter, readings will be assigned from this book and from other materials, all of which will be linked to the Canvas course. Each of the reading assignments will be tied to a discussion. This book will be used again in SCED491.

Another highly influential book that has been the foundation of inclusive science teaching practice is the following:

**Requirements**
Science Education 481 demands active participation and a willingness to learn and explore teaching and learning science. It is an investigation-intensive class and will require all students to be prepared each day. Attendance for all 10 class meetings is essential for success in this course, not only for your learning but for the learning of others.

**Assignments and Assessments (and grading):**
You will have a number of different assignments over the quarter. Most are due one week after they are assigned.

- **Discussion Questions (10%)**: You are responsible for submitting online discussion comments/questions about each week’s reading before class. Your questions and comments will be posted on a Canvas discussion board and are due at 5 pm the night before class.
• **Discussion Leader (5%)**: You will be responsible for leading one class discussion, most likely with a partner. You will need to work with your partner to decide on a discussion protocol and review the online comments/questions from your classmates to develop good discussion prompts.

• **Attendance and Participation (10%)**: Science Education 481 demands active participation and a willingness to learn and explore teaching and learning science. It is an investigation-intensive class and it will only succeed if all students are prepared each day. The class will become what you make of it. Participation grade is based on your preparedness and contributions during class. Since we only have 10 meetings, missing class without a valid excuse (such as illness or other emergency) will significantly impact your participation grade.

• **Standards Assignment (10%)**: You will explore the Next Generation Science Standards for your topic of choice. This topic will be the focus of several assignments in this course.

• **Preconceptions (10%)**: You will use different sources to identify common prior ideas for a topic of your choice.

• **Learning Progression (15%)**: You will construct a learning progression about a topic of your choice.

• **Probe (10%)**: You will develop a probe that assesses for common prior ideas for a topic of your choice.

• **Lesson Plan (20%)**: You will develop one lesson on your topic and address the important aspects of teaching science. You may use the EdTPA lesson plan format if you choose, but not necessary.

• **Reflective Paper (10%)**: You will write a reflective essay due during finals week. This is meant to be a broad essay about the teaching of science and should be 3-5 pages long, double-spaced, using 12 point font.

**Grading:**

*I am committed to establishing and maintaining a classroom climate that is inclusive and respectful for all students. Learning includes being able to voice a variety of perspectives, and classroom discussion is encouraged. While students’ expressed ideas may vary and/or be opposed to one another, it is important for all of us to listen and engage respectfully with each other.*

**Course Relationship to Teacher Preparation Standards (Woodring College of Education):**
Content Pedagogy: The teacher understands the central concepts, tools of inquiry, and structures of the discipline(s) he or she teaches and can create meaningful experiences that make these aspects of subject matter meaningful to students.

Diverse Learners: The teacher understands how students differ in their approaches to learning and creates instructional opportunities that are adapted to diverse learners.

Communication and Technology: The teacher-in-training uses knowledge of effective verbal, nonverbal and media communication techniques to foster active inquiry, collaboration and supportive interaction in the classroom.

Planning: The teacher plans instruction based upon knowledge of subject matter, students, the community, and curriculum goals.

Other Important Notes

Reasonable Accommodation
Reasonable accommodation for persons with documented disabilities should be established within the first week of class and arranged through the Disability Access Center: telephone 650-3083; email drsfrontdesk@wwu.edu; and on the web at http://www.wwu.edu/depts/drs/

Student Services
Western encourages students to seek assistance and support at the onset of an illness, difficulty, or crisis.

• In the case of a medical concern or question, please contact the Health Center: 650-3400 or www.edu/chw/student_health/
• In the case of an emotional or psychological concern or question, please contact the Counseling Center: 650-3400 or www.edu/chw
• In the case of a health and safety concern, please contact the Office of Public Safety: 650-3555 or www.edu/ps/
• In the case of a family or personal crisis or emergency, please contact the Office of Student Life: 650-3706 or http://www.wwu.edu/dos/office/slo_student_assistance.shtml

Integrity: As a community, Western is committed to integrity in all aspects of academic and campus life. An excellent resource for guiding students is Western’s newly created Integrity website. (See http://www.wwu.edu/integrity/) This site is a clearinghouse of resources that encourages and educates about integrity. Besides covering more common problems related to academic integrity, such as plagiarism and cheating on exams, it also addresses ambiguous areas, such as collaborative work, the use of language translators, and submitting the same paper in different classes. In addition to this site, the University Catalog in Appendix D—Academic Honesty Policy and Procedure—delineates rights and responsibilities. (http://catalog.wwu.edu/content.php?catoid=10&navoid=1794) In this course, students are held responsible for upholding all aspects of this honesty policy and the Student Rights and Responsibilities Code

A condensed list of essential policies written for WWU students that pertain to this class can be found here: Syllabi@WWU
This syllabus is subject to change. Changes, if any, will be announced in class or online. Students will be held responsible for all changes.
